Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 3 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Bowden et al (5,538,209). Bowden et al disclose a flight control system having one cable control system operating one control surface and another cable control system operating another control surface each said cable control system including at least a driving pulley (12, 10) and a set of control cables (14) operatively connected to said pulley and to said control surface, so that the rotation of said pulley causes rotation of said control surface, each pulley independently rotatable about a common axle, (see Figure 1) a driving system operatively connected to receive a control input and having output members could said pulleys to produce an output causing said pulleys to rotate said control surfaces in the intended direction while at the same time enabling continuous operation of the other pulley (see Abstract), an axially movable element to which control input is imparted on one end, a two arm bellcrank pivotally attached to the other end of said axially movable element (74), two links each operatively connected between one of the arms of said bellcrank and one of the pulleys so that either the transnational or a pivotal movement of said bellcrank imparts a rotation movement of said pulleys, (see abstract), wherein one or more springs installed between said

bellcrank and said axially movable element to resist a pivotal movement of said bellcrank relative to resist a pivotal movement of said bellcrank relative to said axially moveable element. (80)

Allowable Subject Matter

3. Claims 7-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: the prior art does not disclose a gust lock installed next to the pulley having a hold or notch provided therein.
